<u>LISTING OF THE CLAIMS</u>

A detailed listing of claims is presented below. Please amend currently amended claims as indicated below including substituting clean versions for pending claims with the same number. In addition, clean text versions of pending claims not being currently amended that are under examination are also presented. It is understood that any claim presented in a clean version below has not been changed relative to the immediate prior version.

---

1.   (Currently Amended) A computer implemented method of automating categorization of data, comprising:

determining a <u>clock</u> time of day;

referencing a time of day profile that correlates <u>clock</u> time of day information with data categories; and

setting a default data category based upon the <u>clock</u> time of day and the time of day profile.

2.   (Currently Amended) The method according to claim 1, wherein the time of day profile correlates a <u>clock</u> time with at least one of a personal data category and a business data category.

3.   (Original) The method according to claim 1, wherein the computer implemented method is carried out within a personal information manager program operating on a programmed processor residing within a palmtop computer.

PALM-3303.SG/ACM/LCH   2   Serial No.: 09/663,363
Examiner: Kapadia, M.   Group Art Unit: 3626

4.   (Original)   The method according to claim 1, further comprising displaying only data categorized in the default data category and hiding data categorized in any other category .

5.   (Original)   The method according to claim 1, further comprising entering data categorized in the default data category .

6.   (Original)   The method according to claim 1, further comprising:

providing an option to change the default data category to a selected data category; and

entering data categorized in the selected data category.

7.   (Original)   The method according to claim 1, further comprising:

providing an option to change the default data category to a selected data category;

displaying only data categorized in the default data category; and

hiding data categorized in any other category .

8.   (Original)   The method according to claim 1, wherein the data comprises one of address book data, to-do list data, notes data, email data and calendar data.

9.   (Currently Amended)   A palmtop computer, comprising:

a programmed processor;

a personal information manager program operating on the programmed processor;

a clock for determining a <u>clock</u> time of day;

program means for referencing a time of day profile that correlates <u>clock</u> time of day information with data categories; and

setting a default data category for the personal information manager based upon the <u>clock</u> time of day and the time of day profile.

10.   (Currently Amended)   The apparatus according to claim 9, wherein the time of day profile correlates a <u>clock</u> time with at least one of a personal data category and a business data category.

11.   (Original)   The apparatus according to claim 9, further comprising a display;

and wherein only data categorized in the default data category is displayed on the display;

and wherein data categorized in any other category is hidden.

12.   (Original)   The apparatus according to claim 9,
further comprising data entry means for entering data
categorized in the default data category.

13.   (Original)   The apparatus according to claim 9,
further comprising:

program means for changing the default data category to
a selected data category; and

data entry means for entering data categorized in the
selected data category.

14.   (Original)   The apparatus according to claim 9,
further comprising:

a display;

program means for changing the default data category to
a selected data category;

wherein only data categorized in the default data
category is displayed on the display; and

wherein data categorized in any other category is
hidden.

15.   (Original)   The apparatus according to claim 9,
wherein the data comprises one of address book data, to-do
list data, notes data and calendar data.

16.   (Currently Amended)   An electronic storage medium containing instructions which, when carried out on a programmed processor, carry out the steps of:

determining a <u>clock</u> time of day;

referencing a time of day profile that correlates <u>clock</u> time of day information with data categories; and

setting a default data category based upon the <u>clock</u> time of day and the time of day profile.

17.   (Currently Amended)   The electronic storage medium according to claim 16, wherein the time of day profile correlates a <u>clock</u> time with at least one of a personal data category and a business data category; and wherein the data comprises one of address book data, notes data, email data, to-do list data and calendar data.

18.   (Original)   The electronic storage medium according to claim 16, further comprising a personal information manager program operates on a programmed processor residing within a palmtop computer.

19.   (Original)   The method according to claim 16, further comprising:

providing an option to change the default data category to a selected data category; and

entering data categorized in the selected data category.

20. (Original) The method according to claim 16, further comprising:

displaying only data categorized in the default data category and hiding data categorized in any other category;

providing an option to change the default data category to a selected data category;

if the default category is changed to the selected category, displaying only data categorized in the selected data category and hiding data categorized in any other category.

21. (New) A computer implemented method of automating categorization of data, comprising:

determining a current time of day;

referencing a time of day profile that correlates current time of day information with data categories;

setting a default data category based upon said current time of day and said time of day profile; and

performing actions only within said default data category.

22. (New) The method of Claim 21, wherein said actions is taken from a list consisting of:

creating a data entry;

editing a previously created data entry;

retrieving said previously created data entry;

displaying data in said previously created data entry; and

querying said default data category.

23. (New) The method of Claim 21, wherein said current time of day comprises:

current time information;

current day of the week information;

current month of the year information; and

current year information.

24. (New) The method of Claim 21, further comprising:

changing said default data category to another data category for performing actions only within said another data category.
